

Case Study

Major Developments

Any major development will usually have trees present. It is also likely to have a high level of public interest and run the risk of significant objections and new Tree Preservation Orders.

Tree Survey

A BS5837 compliant site survey identifies early in the design process which trees should be retained and helps meaningful discussions with the Local Planning Authority.

High Quality Plans & Reports

Clear and accurate reports with supported with high quality plans give all parties confidence the scheme can progress with limited impact to the retained trees. Appropriate site inspections then help to discharge planning conditions and ensure the long term health and stability of the trees.

“The reports and plans were first class and really helped everyone understand the development and the potential impacts to the on-site trees.
